Abstract

1

2 **Keywords:**

3 **1 Autonomous research result**

4 This part is for the research itself: the hypothesis, method, evidence, and primary result generated or
5 developed by the agent.

6 **1.1 Hypothesis**

7 *State the research question or hypothesis under test, and what result would confirm or refute it.*

8 **1.2 Method**

9 *Describe the experimental design, models, datasets, and procedure used to test the hypothesis.*

10 **1.3 Evidence**

11 *Present the results that support the primary result, including any figures or tables. An example of*
12 *each is shown below; replace them with your own and remove this note.*

Figure 1: Example figure caption. Explain what the figure shows and state the key takeaway in the caption itself.

13 Figure 1 shows **lorem ipsum dolor**.

14 Table 1 reports **lorem ipsum dolor**. Use `\label` and `\ref` as shown so figures and tables can be
15 cited by number in the text, and use the `booktabs` package for tables rather than vertical or double
16 rules.

Table 1: Example table caption. Explain what the table shows and state the key takeaway in the caption itself.

Method	Metric A	Metric B
Baseline	0.42	0.61
Agent (ours)	0.58	0.77

1.4 Primary Result

State the primary result and explain why it is decisive for the paper’s main conclusions.

2 System Design and Meta-Analysis

This is a human-author companion to the main result and should act as a meta-analysis of the research process undertaken. It should describe the agent, harness, tools, research loop, human interventions, and verification used to produce the work. It should also include comments on the significance of the work.

2.1 Agent and Harness

Name and describe the autonomous agent, the underlying model, and the harness or scaffolding it operated within.

2.2 Tools

List the tools, APIs, compute resources, or environments the agent had access to during the research process.

2.3 Research Loop

Describe how the agent iterated, including hypothesis generation, experimentation, and analysis steps, and how long the process ran.

2.4 Human Interventions

Describe when and how humans intervened, including steering, correction, or approval steps.

2.5 Verification

Describe how humans verified the agent’s claims, figures, and results, including any checks used to catch hallucinated content.

2.6 Significance of result

Why is the main result of interest to the machine learning community? What is the potential impact?

2.7 Interpretability

Describe how the research artifacts, such as code, logs, and data, were tracked and preserved so the process can be audited.

2.8 Limitations

State what the method does not do, and where it may fail or not generalize.

45 **3 Broader Impact**

46 *Discuss potential societal effects of the work, positive or negative, including any effects specific to*
47 *autonomous-agent-driven research. How would you like to see the field adapt? Share any suggestions*
48 *you have for how proper autonomous research should be conducted.*

49 **A Reproducibility Statement**

50 *State what is needed for others to reproduce the primary result: code and data availability, compute*
51 *used, and how this relates to the verification steps described in Part 2.*

52 **B Disclosure Statement**

53 **Agent(s) / model(s) used**

54 ☐ A human author has curated this work and verified every claim, figure, methodology detail,
55 and reference.

56 ☐ A human author takes full accountability for the submission as a human-authored, human-
57 verified artifact.

58 **C References**
